SECTION - A

In 1499, Brazil was discovered by Vicente Yañez Pinçon, a native of Palos, and one of the companions of Columbus. He and his brothers were in search of new countries, and after touching at the Cape de Verd Islands, he steered to the south-west, till he came to the coast of Brazil, near Cape St. Augustine, and coasted along as far as the river Maranham, and thence to the mouth of the Oronoco. He carried home some valuable drugs, precious stones, and Brazil wood; but had lost two of his three ships on the voyage. He made no settlement, but had claimed the country for Spain.

Meantime Pedro Alvarez Cabral was appointed by Emanuel, King of Portugal, to the command of a large fleet, destined to follow the course of Vasco de Gama in the east. Adverse winds, however, drove the expedition so far to the westward, that it fell in with the coast of Brazil, and the ships anchored in Porto Seguro on Good-Friday of the year 1500. On Easter-day the first Christian altar was raised in the new continent under a large tree, and mass was performed, at which the innocent natives assisted with pleased attention: the country was taken possession of for the crown of Portugal by the name of the land of the Holy Cross, and a stone cross was erected to commemorate the event. Cabral dispatched a small vessel to Lisbon to announce his discovery, and then, without making any settlement, proceeded to India.

On the arrival of the news in Europe, the King of Portugal invited Amerigo Vespucci from Seville, and sent him with three ships to explore the country. After a long and distressing voyage they arrived, and very early in their intercourse with the natives they discovered that they were cannibals, but nevertheless they established a friendly intercourse with some of the tribes; and after coasting along South America as far as lat. 52°, finding neither port nor inhabitants, and suffering from intolerable cold, they returned to Lisbon in 1502.

Early in the next year Amerigo sailed again with six ships; but having stood too near the coast of Africa, after passing the Cape de Verds by the orders of the commander, four of the vessels were lost, but Amerigo with the other two reached a port which they called All Saints. There they remained five months, in friendship with the natives, with whom some of the party travelled forty leagues into the interior. They erected a small fort, and left twelve men with guns and provisions, and having loaded their two ships with Brazil wood, monkeys, and parrots, they returned to Lisbon early in 1504.

But as Brazil, as it now began to be called, did not promise that ample supply of gold which the Spaniards had discovered in their new countries, and which the Portuguese gained with less hazard from Africa, and from the East, the country ceased for a time to excite the attention of government, and the first actual settlements were made by private adventurers, who, on account of their trade, were desirous of having some kind of agents among the people. The first persons employed for this purpose were criminals, a sort of settlers that may do well in an unpeopled country, where there is nothing to do but to reclaim the land, but that must do ill where there are many and savage natives, because they either become degraded to the savage level themselves, if they continue friends, or, if not, they are apt to practise such cruelties and injustice as disgust the natives, render colonisation difficult, and if they teach any thing, it is all the worst part of the life of civilised nations.

But in 1508, Amerigo Vespucci having returned to the service of Spain, the King resolved to take possession of the new land which had been discovered; and founding his claims on the grant of Alexander VI., he sent Vincent Yañez Pinçon and Juan Diaz de Solis to assert them. They made Cape St Augustine's, which Pinçon had discovered, and coasted along to lat. 40° south, erecting crosses as they went; but some disputes having arisen between them, they

returned to Spain: and it appears that the remonstrances of Portugal against the voyage, as an interference with her discoveries, had some weight, for it was not until 1515 that Solis was dispatched on a second voyage, and then it was with the avowed purpose of seeking a passage to the Great Pacific Sea, which had been sought and seen by Balboa in 1513.

That extraordinary but unfortunate man was the first European whose eyes rested on the broad Pacific. He had heard from the Indians of its existence, and resolutely set out to discover it, well aware of the dangers and difficulties he had to encounter. After twenty-five days of suffering and fatigue, he saw the South Sea; he heard of Peru, its mines, and its llamas; its cities and its aqueducts, and he received pearls from the islands that lay in front of St. Miguel's bay, where he walked sword in hand up to his middle into the water and took possession for the King of Spain. No one in Europe now doubted that the western way to the East Indies was discovered.

Great hopes were therefore entertained from the expedition of Solis. That able navigator made the coast of Brazil far to the southward of Cape St. Augustine, where he had been with Pinçon; and on the 1st of January 1516 he discovered the harbour of Rio de Janeiro; thence he sailed still to the southward, and entered what he hoped at first would be a sea, or strait, by which he might communicate with the ocean; but it was the river La Plata, where Solis and several of his followers were murdered and devoured by the natives. The ships then put back to St. Augustines, loaded with Brazil wood, and returned to Spain. But the King Don Emanuel claimed these cargoes, and again remonstrated against the interference of Spain so effectually, that three years afterwards, when Magalhaens touched at Rio de Janeiro, he purchased nothing but provisions. Meantime several French adventurers had come to Brazil, and had taken in their cargoes of Brazil wood, monkeys and parrots, and sometimes plundered some of the weaker Portuguese traders. In 1616, two of these adventurers entered the bay of All Saints, and had begun to trade with the Indians, when the Portuguese commander, Cristovam Jaques, sailing into the port, and examining all its coves, discovered them, and sunk the ships, crews, and cargoes. About the same time, a young Portuguese nobleman, who had been wrecked on the shoal off the entrance of the harbour, and who had seen half his companions drowned, and half eaten by the Indians, had contrived to conciliate the natives. He had saved a musket and some powder from the wreck, and having taken an opportunity of shooting a bird in the presence of the inhabitants, they called him Caramuru, or the man of fire; and, as he accompanied them on an expedition against their enemies the Tapuyas, he became a favourite, married at least one Indian wife, and fixed his residence at the spot now called Villa Velha, near an excellent spring, and not far from the entrance to the bay.

Caramuru, however, felt some natural longing to see his native land, and accordingly seized the opportunity afforded by the arrival of a French vessel, and taking his favourite wife, he went with her to France, where they were well received by the court, the king and queen standing sponsors at the baptism of the Brazilian lady, whose marriage was now celebrated according to the Christian form. Caramuru, however, was not permitted to go to Portugal; but by means of a young Portuguese student at Paris, he communicated his situation to the King Joam III., and pressed him to send an expedition to the bay of All Saints.

Shortly afterwards, Caramuru returned to Bahia, having agreed to freight two ships with Brazil wood as the price of his passage, of the artillery of the ships, and of the articles necessary for trading with the natives. Still, however, as Brazil furnished neither gold, nor that rich commerce which the Portuguese derived from their Indian trade, it was pretty much left to itself for the first thirty years after its discovery; and then the regulations adopted by the court were not,

perhaps, the most advantageous for the country. The coast was divided by Joam III into captaincies, many of which extended fifty leagues, and each captaincy was made hereditary, and granted to any one who was willing to embark with sufficient means in the adventure; and to these captains an unlimited jurisdiction, both criminal and civil, was granted.
